

## **Power Washing**

Once the SARAClean has had time to work, power wash it off with a waterblaster using a fan nozzle (at approx 600-800 psi pressure at the timber surface) Clean from the highest point and work down methodically, overlapping each stroke taking care not to miss any patches and allowing the water to cascade over the unwashed surface to keep it from drying out.

Do not leave the pressure cleaner stationary on the timber at any time.
