Mix Solid & Perforated* refers to the open area and is the ratio that reflects how much of the sheet is occupied by holes, normally expressed by percent. For example, if the open area of the perforated sheet is 30%, it means that 30% of the sheet is holes and 70% of the sheet is material. The holes in a perforated sheet metal form are also known as the open area of that form. The open area of a piece of sheet metal allows for the passage of air & light. Open area is most desirable for applications that require heat dissipation, acoustic absorption, privacy and reduced weight.

Thank you

For choosing Walpix Decorative Perforated Screens.

Do you want something different to what you see in the Special Orders brochure and on the Bunnings website?

Walpix can custom make and/or turn your images, graphics, photos or logos into perforated metal screens & panels. We can replicate photographs, drawings & illustrations, using combinations of hole sizes to successfully recreate every detail, including shadows, tones, and even facial features.

We typically recommend aluminium for exterior applications which is known for its corrosion resistance and durability. With the right finish, the material has an extremely long lifespan. Stainless steel can also be used for exterior applications.

Non-standard sheet sizes & thicknesses can be provided on request for quote & are subject to price & availability at time of order. Powder coating can be arranged using standard Dulux colours, pricing available on request – with or without warranty.

Custom orders are all priced individually so to enquire about a custom-made order talk to the staff at your local Bunnings Special Orders desk.

Easy to Order...

Step 1 Measure site

Step 2 Choose profile, material and colour

Step 3 Complete order form and take to Special Orders desk.

Step 4 Order is sent to Walpix for custom manufacture

Step 5 Order is delivered to store within 4 to 6 wks.*

**Metro stores only. Regional stores may take longer.*
