SUB-SURFACE

Stop wasting money on traditional irrigation!

Developed for Australia's toughest droughts and strict water restrictions, Sustainable Irrigation Sub-Surface (SISS) will save you in all the areas that count.

Super-efficient textile technology

SISS soaks up to 300mm either side of the line so you only use half as much product.

Less environmental impact

Eliminates evaporation and surface run-off with up to 60% less water use.

No exposed line

SISS does its best work hidden underground, so it won't ever make your project look ugly or prone to vandals.

Built tough for tough conditions

Australian made with dense textile fabric defending against root intrusion and wayward shovels.
