- Custom-made colors available for property development projects.

FUNCTIONS AND FEATURES

Smart Security Solutions

BLE AES256 App Control Connect and manage your Lockly™ Secure lock through your smartphone and the AE256 Secure Bluetooth Low Energy Connection. Connects fast, easy, and secure.

Peek Proof Digital Keypad Patented peep-proof technology takes your home security to the next level. Powered by the advanced algorithm by PIN Genie™, access codes are displayed in a shuffled and randomized sequence every time a code is entered, with 3 digits in every button, making it near impossible for an unwanted individual to guess your access code.

3D Fingerprint Sensor Unlike other traditional fingerprint sensors found in locks that utilize optical sensors, Lockly™ Secure incorporates an advanced capacitive 3D sensor that uses electrical current to form an image of the fingerprint to allow only physical fingers, preventing the use of lifted prints. This results in accurate, fast and secure access and can store up to 99 fingerprints.

RFID Smartcard Register and activate the smartcards included in the package/box. Manage or delete access of each registered cards.

Offline Access Codes Lockly™ Secure lock series are the only smart locks in the world that are able to generate multiple access codes without an internet connection through the use of Lockly's patented technology. Issue these codes to your guests via patented technology. Issue these codes to your guest via text messaging for them to access the door, even if the power or internet is out in the area.

Enhanced Security Features

At Home Privacy Mode When this feature is activated, the door cannot be opened from outside using the digital touchscreen. The touchscreen can be locked by toggling this switch to improve security when desired.

Child-proof Switch Add-on security for families with kids and pets kept inside the home. It prevents unconscious unlock from kids or pets playing with the indoor handle. The switch is discreetly located at the back of the indoor handle. It is recommended to always switch on this feature for your kids and/or pets safety.

Emergency Panic Button Conveniently releases the door lock in one push in case of emergency. Press the button located at tip of the indoor handle and push down handle to facilitate quick release.

Security Safe Mode Access keypad disables after multiple attempts with the wrong code and can disable keypad access up to an hour.

Fire Resistant The lock is compliant and passed fire test standard.

Premium Build Grade Designed and assembled with heavy-duty zinc alloy, stainless steel and high-impact materials. It is made with scratch resistant coating and passed salt spray rust test.

Unlock with Physical Key The lock is equipped with high quality 6-pin lock cylinder for the backup key access. Engineered with mechanical complexities for maximum security.

FUNCTIONS AND FEATURES

Convenient Features

One-Touch Close Allows to immediately lock with one touch anywhere on the keypad touchscreen.

Swift Switch Button Serves as switch mode button during set up and programming to functions such as keypad touchscreen modes, access code verification and deletion.

Universal Installation Lockly™ Secure Series smart lock can be installed for both RIGHT swing and LEFT swing doors. Universal orientation compatible for most from 1-3/8" to 2" thick.

Ergonomic Design The keypad /touchscreen is angled at 11 degrees which makes it comfortable for both eyes and hands to access.

Lasting Battery with Backup Lockly™ Secure uses standard AA batteries (included) which operates the smart lock for at least one year and is also supported by a battery backup allowing you to power your lock with a 9V from the outside in case the batteries are dead.

Mute Function The door can be quietly opened without any sound operation to avoid disturbing neighbors.

Soft Start Motor Control We pioneered soft start technology to significantly prolong the battery life of the product. The opening and closing of the lock is a lot quieter compared to competition.

PIN Genie Smart Lock App

Remote Code Management Share encrypted eKeys containing detailed information such as duration of stay, initial entry, multiple or single authorizations, etc., to your guests. Send it over email or text to enable them to enter your home using a smartphone to unlock your door.

Monitor Access History Monitor the unlock history of your door on your phone. Receive push notifications on your smartphone when temporary access codes are used to enter your home. All entry record contains user information. Even a fingerprint, smartphone or access code entry is recorded according to the user's profile name. For security and convenience, in case some user profiles no longer required to access the lock, their access can be deleted and replaced.

Multi-User Access Give multi-user access to up to 8 permanent users at any given time and issue remote digital eKeys for guest access. Monitor the access history through our IOS and Android app for smartphones.

Dedicated Servers The App is maintained and managed by dedicated team of IT experts updating the product firmwares sent over the air (OTA) to ensure lock users have access to the latest features. This also allows PIN Genie to customize the App as required by hotels, property developers, resorts, etc.,
