

Installation Instructions

Please read the below instructions prior to installing your mirror.

NB. We have not specified fixing hardware to use as different surfaces require different hardware.

01

Ensure the wall you are hanging the mirror on is a load bearing wall and can bear the weight of the mirror.

02

Measure the centre distance between the two hanging brackets and mark the corresponding position on the wall.

03

Use an impact drill to punch holes in the marked positions with a depth of approx. 5cm.

04

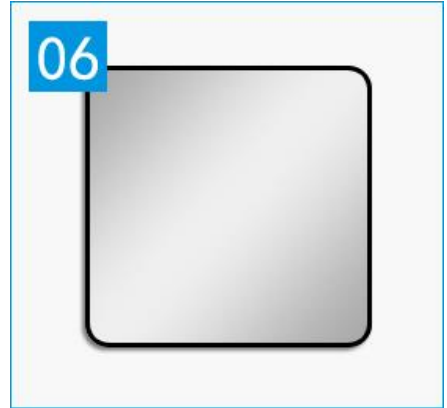

Insert the expansion screw into the drilled holes.

05

Drive the screw into the expansion screw, leaving 5mm out for hanging the mirror.

06

Hang the mirror and check the safety.
