

## Connecting Wi-Fi Tap Timers with the Smart Moisture Sensor

The WXMS Smart Moisture Sensor measures the moisture and temperature of your soil.

After setting a threshold moisture level (20%, 40%, 60%, 80% or 100%), any **WX Tap Timer** connected to the **WXMS Smart Moisture Sensor** will not water a scheduled **Start** if the moisture level is at or above this threshold.

In some cases, the **WXMS Smart Moisture Sensor** connected to a **Wi-Fi Hub** will affect all **WX Tap Timers** connected or only affect one **WX Tap Timer**. It depends on the version of your **Wi-Fi Hub**.

Please check the main module version of your **Wi-Fi Hub** to determine the outcome of having a **Moisture Sensor** connected to your device.

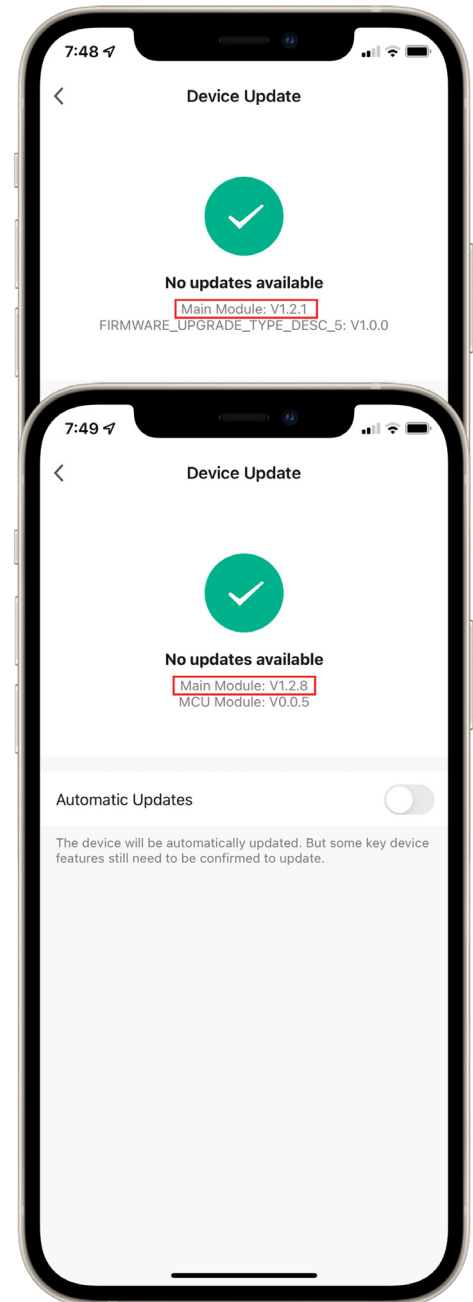

Open the **Wi-Fi Hub** through Holman Home, choose the **Pencil icon**, choose **Device Update** and then check the Main Module version.

### IF THE WI-FI HUB MAIN MODULE VERSION IS 1.2.8 OR GREATER:

- ✔ This hub will work with both **WX1** and **WX2 Tap Timers**
- ✔ It is possible to add 4× **WX1/WX2 Tap Timers** and up to 8× **WXMS** given an optimal environment
- ✔ Each **WXMS Smart Moisture Sensor** will affect only one **WX1 Tap Timer** or one zone of a **WX2 Tap Timer**

### IF THE WI-FI HUB IS VERSION 1.2.1:

- ✔ Please check the MCU version of the **WX1 Tap Timer**
- ✔ Open the **WX1 Tap Timer**, choose the Help screen and then check the MCU version—just the first two parts of the information

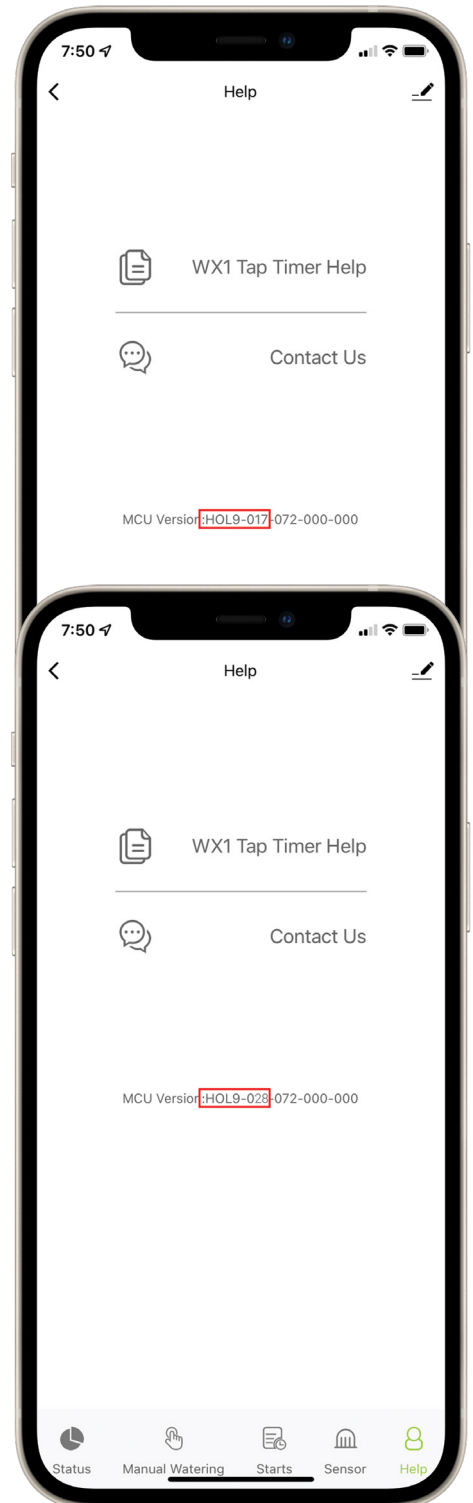

# HOLMAN

## WX1 TAP TIMERS WITH MCU VERSIONS HOL9-017 OR HOL9-018:

- ✓ These hubs will only work with **WX1 Tap Timers**
- ✓ It is possible to add 4x **WX1s** and 1x **WXMS** given an optimal environment and one **WXMS Smart Moisture Sensor** will affect the scheduled watering of all attached **WX1 Tap Timers**

## WX1 TAP TIMERS WITH MCU VERSIONS HOL9-028 OR HOL9-030:

- ✓ These hubs will connect with **WX1 Tap Timers**
- ✓ These hubs will also connect a **WX2 Tap Timer** but not as a Holman device
- ✓ NOTE: **WX2 Tap Timers** cannot be supported with these hub versions
- ✓ It is possible to add 4x **WX1s** and 4x **WXMS** (given an optimal environment) and each **WXMS Smart Moisture Sensor** will affect only one **WX1 Tap Timer**
